

Jason Spratt on the proposed Dudgeon Point Coal Terminal in central Queensland. Jason has been working in-house with DPPM on various project management tasks, state and commonwealth approvals, community engagement and strategic corporate advisory.

Port of Melbourne Corporation (PoMC)

The Port of Melbourne is located within one of Australia's most urbanised areas. A report outlining International and Australian approaches to Port Environs planning was prepared for the Corporation as part of their forward strategy work. Having travelled extensively in 2007 and 2011 to several world seaports, Jason was able to draw upon these experiences and contacts for inclusion in this important project.

Department of Economic Development, Tourism and the Arts (Tasmania) (DEDTA)

In May we were commissioned by DEDTA with the AEC Group to undertake a planning assessment of the Macquarie Point Rail yards adjoining the Hobart Port area. The work focused on the management of the urban interface between the working port and redevelopment options for the rail yards site.

North Queensland Bulk Ports (NQBPA)

In late June, we conducted a peer review of the draft Land Use Plan for the Port of Weipa on behalf of NQBPA.

welcome

Welcome to our inaugural company e-newsletter!

This newsletter will keep you up to date with the range of major projects, research and educational tasks we've been working on in Queensland, Victoria and Tasmania in the first half of 2012.

Sprott Planning & Environment would like to thank our valued clients for an incredibly exciting start to 2012. We look forward to providing you with *strategic, creative and balanced* advice into the future.

We truly value your business.

Jason Spratt

major projects

BHP Billiton (BHPB)

We have been working with BHPB on the proposed Abbot Point expansion (Terminal 2) in northern Queensland at the Port of Abbot Point. Jason has been working with BHPB on various project tasks including the Cumulative Impact Assessment work as well as state and commonwealth approval issues. Jason has also been working with BHPB and the Queensland Ports Association - examining future commercial shipping forecasts in and around the Great Barrier Reef World Heritage Area as part of a major Statewide Shipping Assessment. This work will continue into the second half of 2012.

Dudgeon Point Project Management (DPPM)

We have been working with DPPM (a subsidiary of Brookfield Queensland) on the proposed Dudgeon Point Coal Terminal in central Queensland.

conferences & educational activities

In June this year, Jason was invited to travel to France to present at the **13th World Cities and Ports Conference** in Nantes-Saint Nazaire. The conference was well attended with 450 delegates from over 46 countries. Jason's Interface Planning presentation was extremely well received with many delegates requesting further information and offering assistance with Jason's studies through Griffith University.

As part of our ongoing commitment to planning and environmental education, Jason has been assisting Griffith University's School of Urban and Regional Planning by co-convening the fourth year Planning Practicum course at both Gold Coast and Nathan campuses. Having just completed marking exams for the fourth year students as part of their assessment, it is clear that Griffith University will

this year farewell some very talented students!

Jason also continues his higher research degree studies with Griffith in the area of interface planning.

committee work

In February, Jason was confirmed as the Australian representative on the International Port Master Planning Working Group (Marcom WG 158) coordinated by *The World Association for Waterborne Transport Infrastructure* (known globally as PIANC).

As part of this work, he will be travelling to participate in technical workshops with representatives from several other countries.

corporate charity

In January, Sprott Planning & Environment chose the Royal Flying Doctor Service of Australia as our corporate charity. Towards the end of the year a donation will be made to the RFDS to assist with their continued work throughout Australia.

Each year, our company will make a corporate donation to an Australian-based community service organisation or charity.

We believe this is a responsible way of making a positive impact throughout our community.
